Unit Rate Grocery Activity

Miss Serafin took her grandma to Strack & Van Til over the weekend. Her grandma was trying to find the unit price of all the items on her grocery list. Can you help Miss Serafin's grandma find the unit rate for each other following items below. Make sure to show all work and label your answer!

Remember:

- Cost (\$) always goes in the numerator!!!
- Unit rate is a denominator of 1

Example:

1 Dozen eggs (12 eggs)

$$\text{Rate: } \frac{\text{Cost of Eggs (\$)}}{\text{\# of eggs}} = \frac{\$0.69}{12 \text{ eggs}}$$

$$\text{Unit Rate: } \frac{\text{Cost of eggs (\$)}}{1 \text{ egg}} = \frac{\$0.69 / 12}{12 \text{ eggs} / 12} = \frac{\$0.06}{1 \text{ egg}}$$

Kraft Salad Dressing
